

Yuyao Wang

PhD candidate

Department of Mathematic

University of California San Diego

La Jolla, CA 92093 U.S.A.

email: yuwo79@ucsd.edu

Education

2019 - now	<i>PhD</i> , Mathematics with a specialization in statistics, University of California San Diego
2019 - 2022	<i>MA</i> , Mathematics, University of California San Diego
2015 - 2019	<i>BS</i> , Mathematics, Xi'an Jiaotong University

Research Interests

Causal inference, survival analysis, missing data problems, semiparametric theory, and high dimensional statistics. Application to healthcare data and aging studies.

Fellowships

2019 - 2023	Halicioglu Data Science Institute Graduate Prize Fellowship.
-------------	--

Awards

2023	Student Paper Competition Award, 2023 Lifetime Data Science Conference.
------	---

Publications and Preprints

2022	Wang, Y. , Ying, A., Xu, R. (2022) Doubly robust estimation under covariate-induced dependent left truncation. <i>arXiv preprint arXiv:2208.06836</i> (Under second round of review in <i>Biometrika</i> ; won Student Paper Competition Award at 2023 Lifetime Data Science Conference)
2023	Peng, Y., Wang, Y. , Xu, R. (2023). Measures of explained variation under the mixture cure model for survival data. <i>Statistics in Medicine</i> , 42(3), 228-245.

Presentations

2023	Doubly Robust Estimation under Covariate-induced Dependent Left Truncation. <i>Presentation at 2023 Lifetime Data Science Conference.</i>
2023	Multiply Robust Estimation of Treatment Effect for Time-to-event Outcome under Dependent Left Truncation. <i>Poster at 2023 American Causal Inference Conference.</i>
2023	Doubly Robust Estimation under Covariate-induced Dependent Left Truncation. <i>Poster at 2023 Public Health Research Day at UCSD.</i>
2022	Semiparametric Estimation for Non-randomly Truncated Data. <i>Poster at 2022 American Causal Inference Conference.</i>
2022	Semiparametric Estimation for Non-randomly Truncated Data. <i>Poster at 2022 Public Health Research Day at UCSD.</i>

Research Experience

2023 - now	<p>Data Analysis for Alzheimer Brain Pathology at Death, University of California San Diego</p> <p>Research Assistant Supervisors: Ronghui Xu, Lon White</p> <ul style="list-style-type: none">• Data visualization and data analysis for Alzheimer brain autopsy data from Honolulu Asia Aging Study.• Identified 3 middle life risk factors (FEV₁, dietary selenium, dietary maltose) for Alzheimer brain pathology at death.
2020 - now	<p>Doubly robust Estimation under Covariates-induced Dependent Left Truncation, University of California San Diego</p> <p>Student researcher for PhD thesis Supervisor: Ronghui Xu</p> <ul style="list-style-type: none">• Derived the efficient influence curve (EIC) for the expectation of an arbitrarily transformed survival time.• Constructed EIC-based estimators that are shown to have favorable properties, including model double robustness, rate double robustness, and semiparametric efficiency.• Provided technical conditions for the asymptotic properties that appear to not have been carefully examined in the literature for time-to-event data.• Our work represents the first attempt to construct doubly robust estimators in the presence of left truncation.• Applied our estimator to analyze a data set from a study on central nervous system (CNS) lymphoma and a data set from the Honolulu Asia Aging study.• Extended the doubly robust estimating function to for parameters in other settings, including causal effects and hazard ratio under a marginal Cox model.
2020 - 2022	<p>Measures of Explained Variation under the Mixture Cure Model, University of California San Diego</p> <p>Student researcher Supervisor: Ronghui Xu</p>

- Proposed two approaches to define explained variation under the mixture cure models: one based on the Kullback-Leibler information gain and the other based on residual sum of squares.
- Studied properties of the proposed measures both analytically and with simulation studies; applied the proposed approaches to analyze data on bone marrow transplant and the SEER-medicare data.

2020 - 2021

Covariate balancing weights for estimating average treatment effect with censored time-to-event data, University of California San Diego

Student researcher | Supervisor: Jelena Bradic

- Reviewed the literature on covariate balancing methods and investigated the possibility of developing covariate balancing weights to estimate ATE for censored time-to-event data.
- Developed algorithms that utilize IPCW to handle censoring and balancing weights to balance the mean of covariates in different treatment groups.

2018 - 2019

Posterior Consistency for Bayesian Method of Inverse Problems with Non-Gaussian Noise Assumption, Xi'an Jiaotong University

Research assistant | Supervisor: Jianxiong Jia

- Studied the methods and algorithms of Bayesian approach to inverse problems.
- Generalized the consistency result in *Posterior consistency for Bayesian inverse problems through stability and regression results* by Sebastian J Vollmer to Bayesian inverse problem with Gaussian mixture noise.

2018

Active Subspace and Sliced Inverse Regression Georgia Institute of Technology

Research assistant | Supervisor: Wenjing Liao

- Proved two theorems for the error bounds of the estimated covariance matrix and the estimated projection matrix for the specific problem we studied when using active subspaces.
- Compared the performance of active subspace method with sliced inverse regression in simulation and analyzed convergence rates and find the optimal tuning parameter for active subspace method.

2017 - 2018

Transfer Learning and Domain Adaptation, Xi'an Jiaotong University

Research assistant | Supervisor: Limin Li

- Reviewed the literature of transfer learning and domain adaptation.
- Implemented CNN, DAN and JAN and assessed these methods using Office-31 and Caltech-10 datasets.

Teaching Experience

University of California San Diego

2024

DSC 180B: Data Science Project II, TA, Winter 2024.

2023

DSC 180A: Data Science Project I, TA, Fall 2023.

High School Math Program (Probability and Statistics, advanced track), mentor, Summer 2023.

	MATH 284: Lifetime Data Analysis, TA, Spring 2023.
	MATH 181B: Introduction to Mathematical Statistics, TA, Spring 2023.
2022	DSC 180A: Data Science Project I, TA, Fall 2022.
	MATH 181A: Introduction to Mathematical Statistics I, TA, Winter and Spring 2022.
2021	MATH 10A: Calculus I, TA, Fall 2021.
	MATH 185: Introduction to Computational Statistics, TA, Spring 2021.
	MATH 189: Data Analysis and Inference, TA, Winter 2021.
2020	MATH 11: Calculus-Based Probability and Statistics, TA, Fall 2020.
	MATH 189: Data Analysis and Inference, TA, Winter and Spring 2020.
2019	MATH 10B: Calculus II, TA, Fall 2019.

Outreach

2023	Presentation at the UCSD Halicioglu Data Science Institute research review event for industry partners
2023	Poster presentation at the UCSD Halicioglu Data Science Institute Open House for prospective PhD students
2022	Moderator for the Prospective International Graduate Student Panel in math department at UC San Diego
2022	Mentor in AWM undergrad mentorship program at UC San Diego
2020 - 2021	Mentor in math graduate mentorship program at UC San Diego
